

QuickStart Service for Cortex XDR Pro per TB

Quickly Deploy Your Cortex Data Lake and five Device Feeds

To quickly increase your capabilities, our consultants will help you plan and execute your Cortex XDR™ deployment. This includes configuration of Cortex™ Data Lake, plus integration with Panorama™ network security management and data feeds from five devices. Knowledge transfer to your team is included, as is documentation upon completion of the engagement. The results will be an up-and-running Cortex XDR framework and associated operations to automate detection and accelerate investigations.

Benefits

- Fast-tracked implementation with Cortex Data Lake configuration and data feed integration.
- Consolidated visibility of alerts from Next-Generation Firewalls and third-party devices.
- Reduced deployment risks with assistance from our experts, utilizing best practices.
- Effective operations, administration, and management with knowledge transfer to your team.

How It Works

Planning and Discovery

Our expert consultant will work with you to create a Cortex XDR Solution Design Document to address your business needs. This includes designating which five devices will be set up to feed data into Cortex Data Lake. The consultant will capture your environment requirements and current settings, including:

- Active Directory® structure
- Directory services
- Cortex Data Lake
- Network topology
- Proxy settings

- Endpoint agent software requirements
- Firewall requirements
- Endpoint rollout plans for supported operating systems
- Security information and event management (SIEM) integration, if applicable

Configuration and Review

Once the Cortex XDR Solution Design Document is in place, the consultant will configure your Cortex XDR framework as well as integrate data feeds from five devices to populate Cortex Data Lake.

Deployment and Optimization

The consultant will deploy Cortex Data Lake with proper integration with Panorama. The consultant will also confirm alert visibility from Next-Generation Firewall devices and integrate third-party alerts.

Documentation and Knowledge Transfer

The Solution Design Document will be updated during the engagement. Upon completion, the consultant will review your deployment with your team and deliver as-built documentation.

To order the QuickStart Service for Cortex XDR Pro per TB, please contact your local Palo Alto Networks partner or sales representative.
